API Documentation

Base URL: `https://api.alkasr-vip.com/`

Authentication Required

Include the following header in all API requests:

```
api-token: YOUR_API_TOKEN
```

Profile

`GET` `/client/api/profile`

Retrieves the user's balance and profile information.

Response Example

```
{
    "balance": "8788.683",
    "email": "user@email.com"
}
```

Products

`GET` `/client/api/products`

Retrieves all available products.

Response Example

```
[
    {
        "id": 365,
        "name": "UC 60",
        "price": 0.104,
        "params": ["ادخل الايدي الاعب"],
        "category_name": "UC 60",
        "available": true,
        "qty_values": {
            "min": 1,
            "max": "15000"
        },
        "product_type": "amount",
        "parent_id": 0,
        "base_price": 0.10,
        "category_img": ""
    },
```

```
    {
        "id": 18,
        "name": "UC 60",
        "price": 1.094,
        "params": ["ادخل الايدي الاعب"],
        "category_name": "PUBG Global ID UC",
        "available": true,
        "qty_values": null,
        "product_type": "package",
        "parent_id": 7,
        "base_price": 0.877,
        "category_img": "images/category/1710948113.webp"
    }
]
```

Filter Products by IDs

`GET` `/client/api/products?products_id=id1,id2,id3`

Retrieves specific products by their IDs.

Get Minimal Product Data

`GET` `/client/api/products?base=1`

Retrieves only product IDs and names.

> **Quantity Values Note**
>
> - `qty_values: null` - Quantity in order must be 1
> - `qty_values: ["110", "150", "210"]` - Only these specific quantities are allowed
> - `qty_values: {"min": "500", "max": "500000"}` - Quantity must be within this range

Content

`GET` `/client/api/content/0`

Retrieves products and categories for the home page (parent ID = 0).

Get Content for Specific Category

`GET` `/client/api/content/[category.id]`

Replace `[category.id]` with the desired category ID to retrieve its products and subcategories.

Order

> **Important: Idempotent Requests with order_uuid**
>
> The `order_uuid` parameter is **required** and serves as a unique identifier for each order request.
>
> When you send a request with the same `order_uuid` more than once:
>
> - The system will **not create a duplicate order**
> - Instead, it will return the **original order data**

- This prevents duplicate charges and ensures order idempotency

Always generate a new UUIDv4 for each unique order attempt.

GET `/client/api/newOrder/364/params?qty=1&playerId=test&anyKey=anyVal&order_uuid=ecbdd545-e616-4aee-8770-7eefa977bcd`

Creates a new order for a product. Must include a unique `order_uuid` to prevent duplicate orders.

Parameter	Description	Required
364	Product ID (replace with desired product ID from products.id)	Yes
qty	Quantity of product	Yes
playerId	Player identifier (can be any name)	Depends on product
anyKey	Any additional parameters can be included as key-value pairs	No
order_uuid	**Unique UUIDv4 identifier** for the order (prevents duplicate orders when retried)	Yes

Response Example

JSON

```
{
    "status": "OK",
    "data": {
        "order_id": "ID_9fffb0d849a45215",
        "status": "accept",
        "price": 1.26048,
        "data": {
            "playerId": "test"
        },
        "replay_api": [
            {
                "replay": ["erg3eg"]
            }
        ]
    }
}
```

Status Values

accept reject wait

About replay_api

The `replay_api` field may be `null` or contain an array of responses from the service provider.

Check Orders

GET `/client/api/check?orders=[ID_a37aaa06,ID2,ID3]`

Checks the status of one or multiple orders.

Check by Order UUID

GET `/client/api/check?orders=[yourOrderUUID]&uuid=1`

Replace `[ID_a37aaa06]` with your order ID or UUID (when using `uuid=1` parameter).

Response Example

JSON

```
{
    "status": "OK",
    "data": [
        {
            "order_id": "ID_9fffb0d849a45215",
            "quantity": 1,
            "data": {
                "playerId": "test"
            },
            "created_at": "2025-04-10 13:55:48",
            "product_name": "A-60UC-stock",
            "price": "1.2604800000000000",
            "status": "accept",
            "replay_api": ["erg3eg"]
        }
    ]
}
```

Status Values

accept reject wait

⚠ Error Codes

Public Error Codes

120	Api Token is required!
121	Token error
122	Not allowed to use API
123	IP not allowed
130	The site is under maintenance

Order Error Codes

100	Insufficient balance
105	Quantity not available
106	Quantity not allowed
107	Player ID blocked
108	2FA required
109	Product deleted or not found
110	Product not available now
111	Try again after 1 minute

112	Quantity is too small
113	Quantity is too large
114	Unknown error
500	Unknown error
